

Environment & Community Policy

Freyssinet is committed to undertaking business in a manner that recognises the importance of environmental protection, sustainability and the need to be a responsible and respected corporate member of the communities within which we work.

To achieve these goals we have established an Integrated Company Management System in place which forms an integral part of the Company's delivery of projects. This system is structured around compliance with the requirements of ISO 14001 and our legislative and regulatory obligations.

In all operations, Freyssinet commits to:

- Conducting our projects in a manner which minimises environmental impacts, including the prevention of pollution and is consistent with the Group's sustainable development principles;
- Setting and reviewing environmental objectives and targets for the Company;
- Promoting environmental awareness through communication and training with our, workers and subcontractors, and encourage them to take personal responsibility for environmental issues;
- Continually improve our environmental performance by periodically reviewing and evaluating our environmental policy and management systems to ensure they remain effective and relevant;
- Engagement with the community in the area surrounding our projects, when part of our contract obligations;
- Communicating with stakeholders regarding our environmental performance.
